VISIT TO SMART LEARNING FACTORY @ KOREA

Smart Learning Factory is a microcosm of a modern industrial manufacturing environment, demonstrating end-to-end production that utilizes the latest technologies of Industry 4.0 and beyond. It also serves as a digital twin of the factory to provide a virtual sandbox for students and fresh engineers to experiment, with the goal of implementing their best ideas in real-world systems.

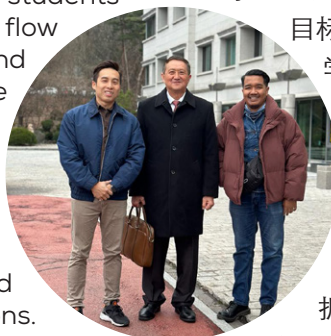

The aim of a learning factory is also to bridge the gap between theoretical knowledge and practical application, by providing students and junior engineers with real-life experience in solving industry problems. From smart warehousing to collaborative human-robot assembly, students will experience not only the physical flow of raw materials into components and fully assembled products, but also the digital flow of data required within and outside of the connected factory. The facility is intelligently monitored and controlled by IoT connected devices, optimized by Local and Cloud AI and Machine Learning Algorithms, and protected by OT Cybersecurity Solutions. It's a significant step towards Industry 4.0 by implementing the principles of automation, data exchange, and smart technology integration in manufacturing.

IEG Co.Ltd., Our Korean partner, has invited Mr. Tony Tee, Our Group Chairman/Group Managing Director, to visit the Smart Learning Factory testbed in Korea Technology University and Dong Daegu to witness the concept of the new learning and training approach in the industry. The visit was accompanied by Mr. Vincent Lim and Mr. Muhammad Muqsit of STP. It was a valuable opportunity to explore and derive insights from advanced manufacturing technologies and the concept of K-Factory.

We believe that it will bring luck to the recipients. The ceremony ended with Galaxians bringing back one or two cartons of mandarin oranges to share with their family and friends during CNY.
